

Saturn, Jupiter can be seen this month in the daylight with good binoculars or a telescope

NEEL ROBERTS
Sky's the Limit

The Zodiacal Light is a faint, roughly triangular, whitish glow

seen in the night sky extended up from the vicinity of the sun along the ecliptic or zodiac. It's tough to find, and the best time is from Sunday, Sept. 5 for two weeks in the east morning twilight.

On Thursday, Sept. 16 and Friday, Sept. 17, look southeast-east near the moon with good binoculars or a telescope and see Saturn and Jupiter day in the daylight

from 6:45 p.m. till nightfall.

On Wednesday, Sept. 22, at 1:21 p.m., the summer's officially over and fall begins.

For this month's events, check the online calendar at calgary.rasc.ca/calendar2022.htm#Sep. *Neel Roberts is a local astronomer in southern Alberta and welcomes your comment at Neel_Roberts@ptccanada.com and 403-560-6574. Check out his work at www.ptccanada.com.*
