

Space Force confirms mankind's best days are still ahead

By NEEL ROBERTS

Are you to unlock the mysteries of space?

Free the Earth from the miseries of disease? Harness the energies, industries, and technologies of tomorrow?

These were the promises from President Donald Trump's 2017 swearing in speech and with another one scheduled to be Wednesday January 20th, 2021 we can expect more on this. After a year like last, maybe you got a T-Shirt for Christmas that says, "I survived 2020", humanity is ready for good news.

The US Space Force (<https://www.military.com/space-force>) created June 18th, 2018 will be recorded as President Trump's greatest accomplishment. The UFO file is the highest classified file in the US government and possibly the world. Rated at Magistrate Level 35, it is 18 levels higher than the normal access a US President has and is rumored to have technology beyond our comprehension.

I believe these two are about to become one and go public. Research and development in the UFO files are speculated to be 2-3 generations ahead of our time so if true, technically what we're using today was from the 1960's. Now that Trump has a MAGA Congress, Senate, SCOTUS and more, we can expect developments to move much faster. One of the best resources on this is <https://www.darkjournalist.com> and he does at least one 3-4 hour broadcast <https://www.youtube.com/channel/UCqOdHprLVQnHhE8FmIY3Yzg> which is not only very encompassing but to

my amazement has not been censored considering all that's disclosed. More to come on this after the historic inauguration day in the New Year!

Sky watch for the next month:

1. 6 planet sunset- On Sunday, January 10th look SW after sundown and you'll see Venus, Pluto, Mercury, Saturn, Jupiter, Neptune in line. You'll need a scope for Neptune and Pluto but the rest are naked eye.
2. Mars & Moon night set- On Thursday, January 21st look West before 1:30 am before they set into the night.
3. Jupiter rises with the Sun- On Friday, January 29th look SE before the Sun rises as you'll need a good solar filter with binos or a scope to see this.
4. Quadrantid Meteor Shower- Peaks just after New Years on Saturday, January 02nd after dusk going on about a week. Best viewing in the Bootes constellation (NEE) and a Moonless night you may catch up to produce some 25 meteors per hour

Public Events for the next month:

As event return to "boots on the ground" check out the virtual gatherings at- <https://calgary.rasc.ca/calendar2021.htm>.

Happy New Year and the best for 2021 and beyond!
